LIGHTS, CONTROLS, SAVINGS! (AND SAFETY, TOO) 5

During COVID-19, consider using the facilities' downtime to drive cost savings — and create safe, clean spaces for the 'new normal'

By Dan McLaughlin

Q&A: WANT PEAK BUILDINGS PERFORMANCE? 6

It's possible to know how your facilities are doing ... without stepping foot on campus

Featuring Bob Swanger, MBA, LEED AP

REMOTE CONTROL 7

During COVID-19 — and beyond — an energy management suite (EMS) can do so much: streamline operations, increase control, reduce wear-and-tear, save time, keep people safe, and drive significant savings.

YOUR CHURCH HAS INVESTED TIME, EFFORT, TRAINING, SUBSCRIPTION FEES, ETC. INTO YOUR CHURCH MANAGEMENT SYSTEM 12

InThrMa will help you leverage that investment for a greater return

READYING YOUR FACILITY FOR THE *NEW NORMAL*

A thought leader forum

National Association of Church Facilities Managers (NACFM) is dedicated to equipping church facilities professionals for the unique care and management challenges they face through continuing education, leadership development and peer support.

In this exclusive Forum, thought leaders at NACFM member organizations discuss:

- How to maximize your facilities' downtime to drive cost savings — and create safer, cleaner spaces
- How to achieve peak building performance even from afar
- What an energy management suite (EMS) can do for your campus, during COVID-19 *and beyond*

Your church has invested time, effort, training, subscription fees, etc. into your Church Management System

InThrMa will help you leverage that investment for a greater return

Church HVAC operations

InThrMa EMS Worship Edition helps you drive more ROI from your Church Management System (ChMS) investment by reducing needless utility spend, reducing equipment wear and tear, reducing labor, and ensuring the right balance of comfort and efficiency for your church.

In short: we automate your HVAC operations using your ChMS events calendar and a whole lot of intelligence in the cloud.

With your HVAC operations in the cloud, you'll be providing your facilities team remote oversight and control, from any browser, when they need to step in, otherwise your facilities team can rest assured that HVAC operations are in good hands.

With any church calendar, there will always be exceptions, rules, requests, ideas, changes, and so on; we provide the ability to customize and handle your spaces ensuring all of the various scenarios are handled as needed. Whether it's the uncertainty of event schedules in the season of Covid or whether it's the routine but not-so routine of hosting events at church. As long as your church calendar is up to date, you'll rest assured knowing that you're not wasting needless resources.

We monitor your systems 24x7 so you'll get alerts, reports and insights that help you address wasteful conditions.

Example:

In your large spaces, when running in 'Auto' mode, can you ever be sure that you're never heating and cooling at the same time in different parts of the space? InThrMa EMS will let you know immediately if we detect that or other wasteful, hard to catch conditions occurring with your HVAC systems.

Church interior signage

Our connected, digital signage is a great compliment to our EMS. Two signage formats and three applications.

Welcome signage

These are signs found just inside your primary entrances. They welcome guests and display the schedule for the day or week ahead. Our team will work with you to customize the content and layout of this display

to ensure an attention getting experience. Incorporate, images, social media, video, data feeds (fundraising status, bible verses), as well as streaming sources. Our Welcome Signage adaptor plugs into any HDMI displays you already have.

Room signage

For your room placard/signage needs, we offer an E-Ink display (think: Kindle reader). These displays provide your church with an always on, dynamic, high-tech look without any messy wires. Again, the layout can be customized for your needs, featuring room name, room schedule, logo. Most importantly, they provide a touchless way to interact with your facilities.

Each sign features a custom QR Code — when scanned from any smartphone, it leads the guest to your InThrMa EMS Facility Portal. A custom portal for your church providing guests with maps, indoor location, room schedule, room resources, room/HVAC requests, facilities contact, etc.

Sunday School/educational displays

Handle your Sunday School educational needs using the same display adaptor as our Welcome Signage. Turn any HDMI display in your classrooms into your teaching platform — no more computers to maintain, touch, sanitize, update, etc.

Our mobile content manager allows your Sunday School staff to display and manage content in their classroom, in real-time, according to their instructional needs.

IoT-connected facilities

As a software firm in the solutions business, we'd love to learn about your church IoT needs and help you integrate the latest and greatest tech. Have a project but you're not sure how to connect the IoT dots? Let's chat and see how we may be able to assist you.
